

Bhuku

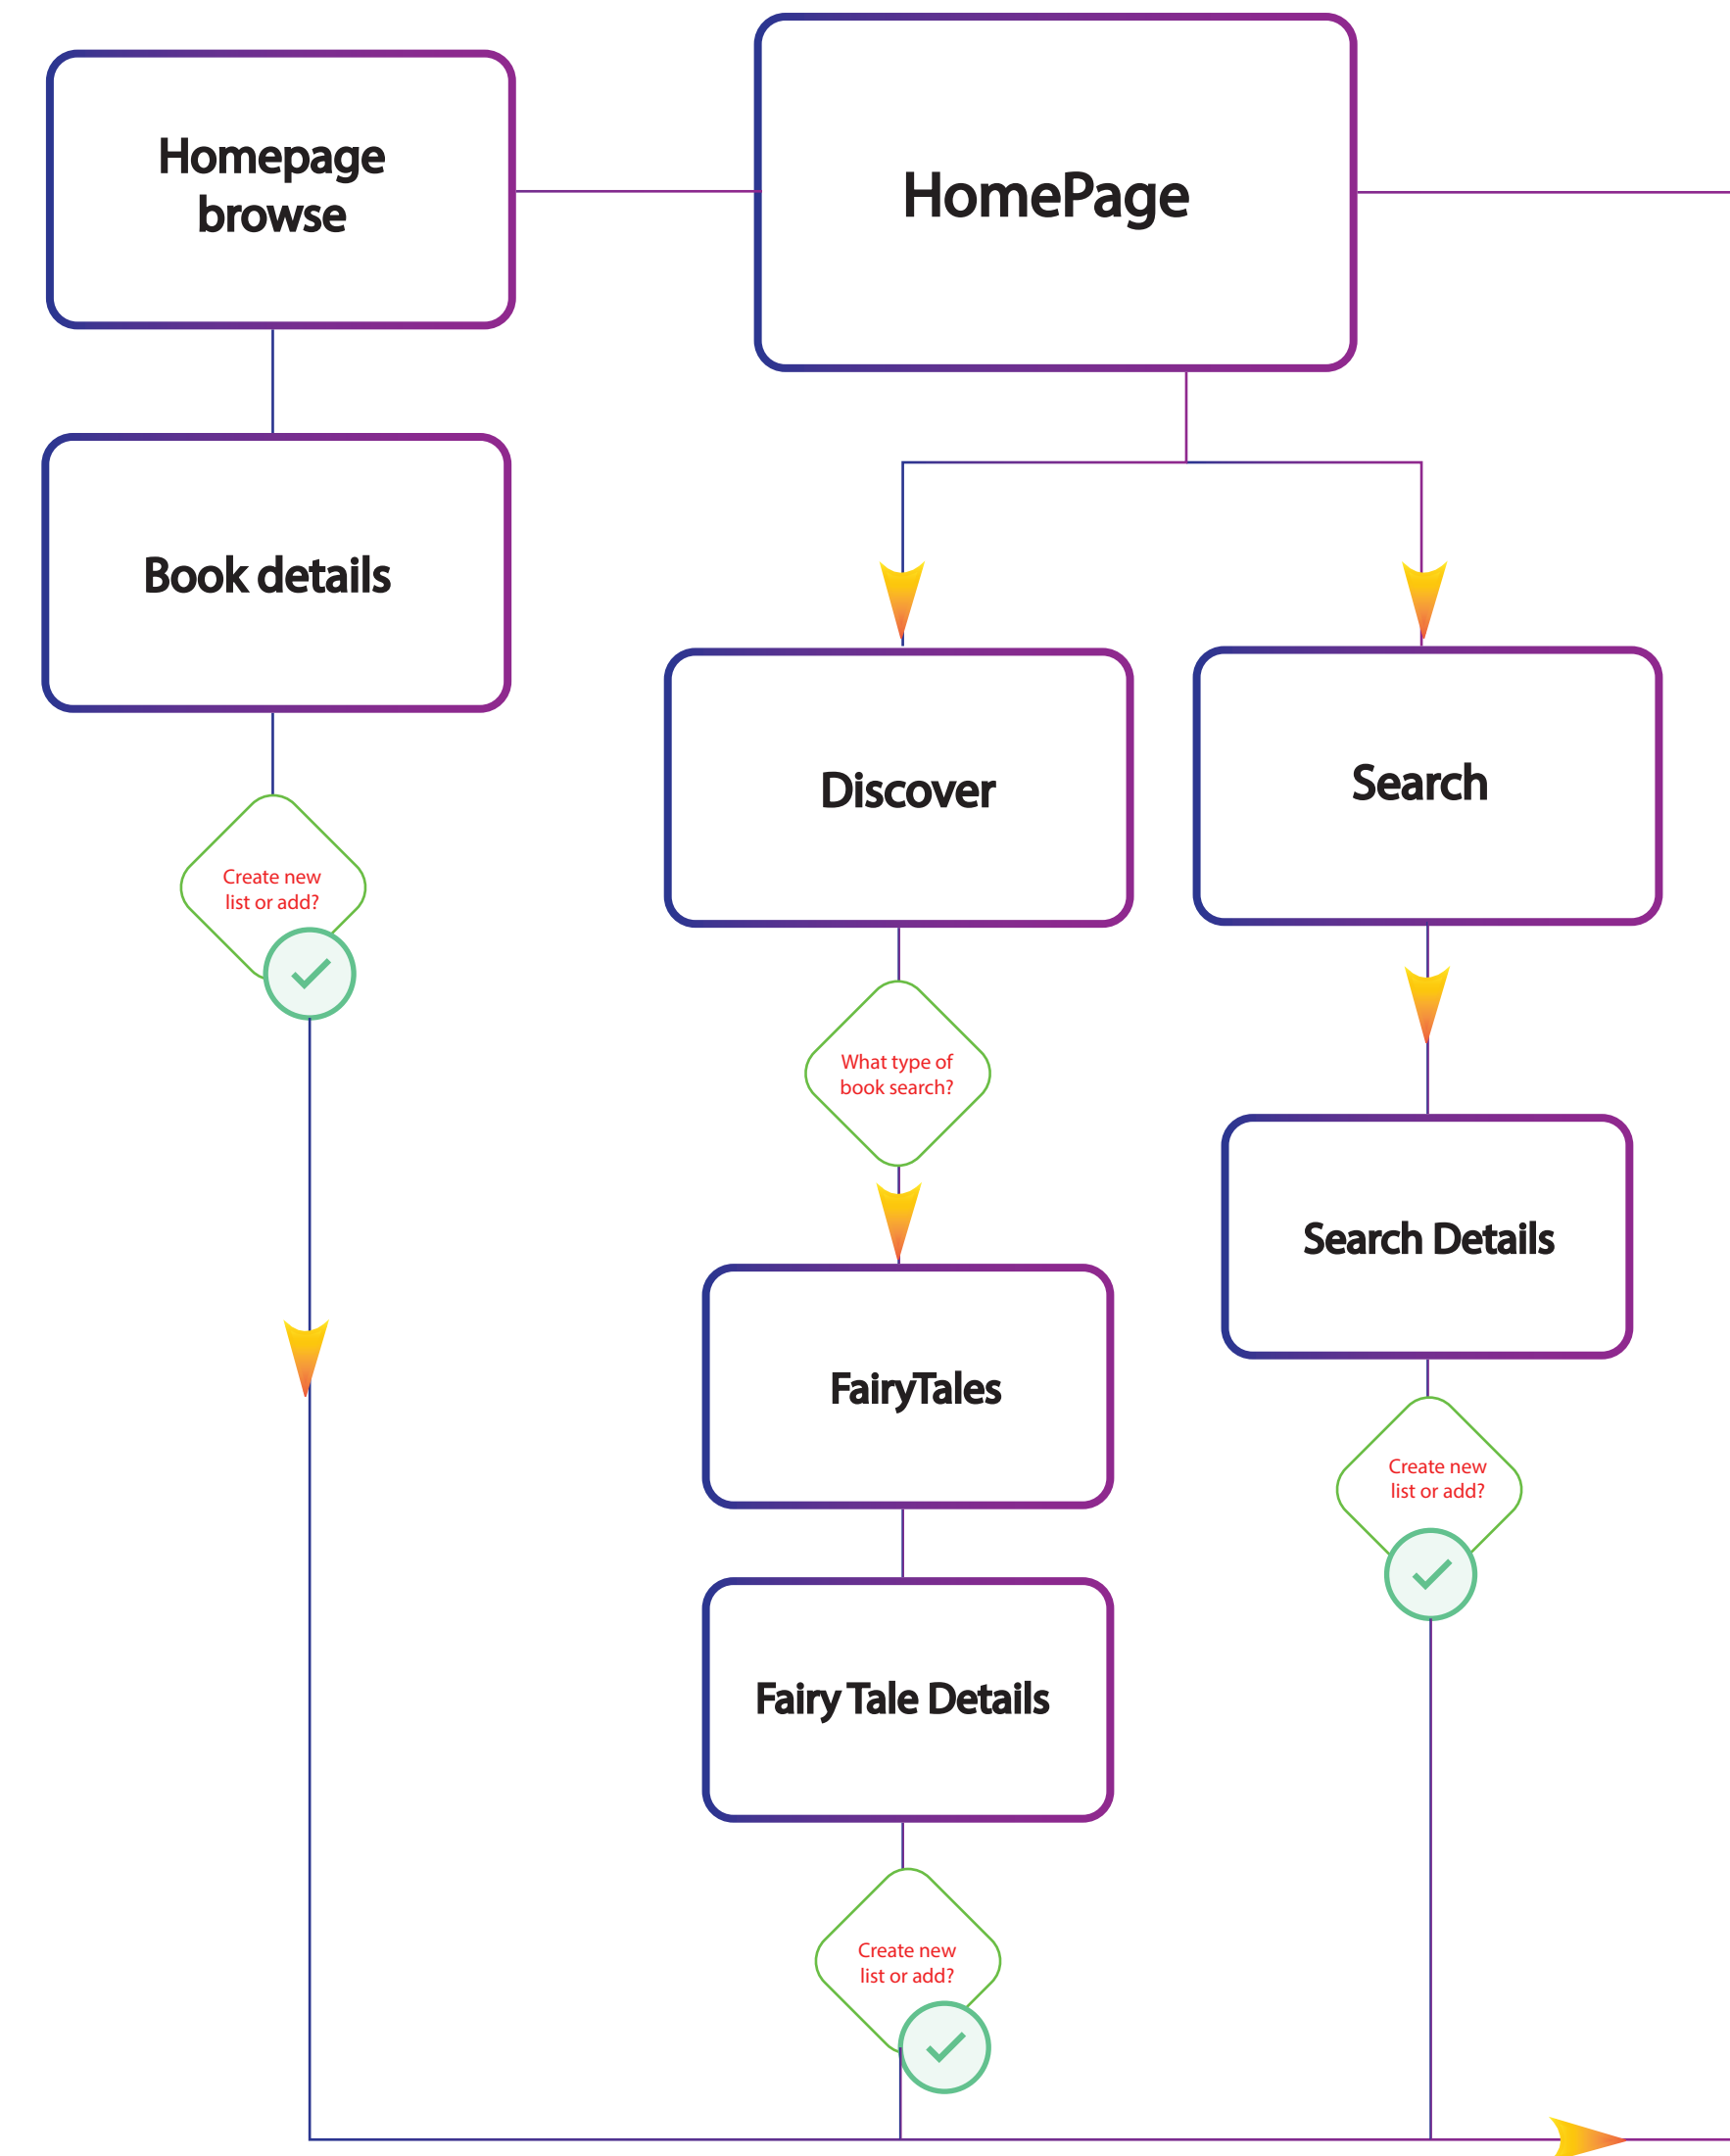

User Task Flow

Bella wants start reading from a list of books she created for a trip during winter break.

Bella wants to search for books to add to her list, She can either search through the homepage categories which are hot trends and the book of the day for the user, or she can go through Bhuku premade list of genre, or use the universal search tool. Which will not be one of my major tasks.

Bella is at the library and finds a good book she wants to read for a class lesson. She scans the book code for fast save.
